

WHY FOAM?

SEE THE DIFFERENCE.

NOT-SO "SOFT SEATING"

FŌM CORE

LIFETIME WARRANTY

Our craftsmanship and attention to detail is what allows us to offer a lifetime warranty.* While other products deteriorate over time due to poor structure, our high-quality foam guarantees your Fōmcore products will withstand the test of time.

QUALITY FOAM AND DENSITY

When thin, cheap foam is wrapped around a wood base, it will deteriorate quickly causing puddling. We use the highest quality, 35#, 70#, and 100# foam possible and have formulated our own proprietary formula for maximum durability.

SOLID FOAM vs. WOOD FRAME

While most of our competitors use a wood frame covered by thin layers of foam, our use of solid foam allows for better durability and flexibility. Adapt the space in any environment with ease while at the same time knowing it won't lose its shape over the years.

NO PINCH POINTS

There's no need to worry about squishing any fingers or toes with any of our fully zippered pieces, making our active seating a fun and safe choice.

CUSTOM SHAPES

Because we use solid foam construction, we are able to create and cut an endless variety of custom shapes on our foam saws. From dolphins to dog bones, our team is ready to bring any idea to life.

LIGHT vs. HEAVY

Our lightweight foam construction allows for adaptability in a variety of environments. Other not-so soft seating can be heavy and bulky and difficult to re-arrange quickly and efficiently.

SOFT EDGE vs. HARD EDGE

When fabric is stretched around a thin layer of foam and wood frame, you can feel it! With solid foam construction you will never feel a hard edge no matter how hard you push into the top of the furniture, making it a safe option for virtually any environment.
